

SACRAMENTO REGIONAL WASTEWATER TREATMENT PLANT BIOGAS COGENERATION SYSTEM DBOM PROJECT

RFQ QUESTIONS AND ANSWERS SUMMARY (RELEASE 2)

DATED: January 8 2021

RFQ Questions and Answers Summary			
No.	Date Received	Respondent Question	Answer
5.)	12/28/2020	<p>Article 3 of the RFP provides an overview of the Procurement, which includes an opportunity for Shortlisted Respondents to review and provide comments on the draft DBoM Contract. We wholly endorse this approach and respectfully request that Regional San include exhibits that describe proposed technical requirements, performance standards/guarantees and quantitative selection criteria in this draft contract. As examples for clarification:</p> <ul style="list-style-type: none"> a. Technical requirements: e.g. influent gas quality and quantity, gas storage availability, system capacity and redundancy requirements, etc. b. Performance standards/guarantees: e.g. engine runtime, power production, emissions criteria, staffing requirements for 'o' period, maintenance contract requirements, etc. c. Quantitative selection criteria: e.g. capital cost, life cycle costs, cost for 'o' period, maintenance contract cost and weighting of each as compared to each other and qualitative criteria <p>We expect the these requirements to drive development of proposal concepts. We believe providing this information in advance of RFP issuance, and providing opportunity for feedback, will be valuable for Regional San to confirm these draft details and requirements will produce proposals that meet agency goals and also streamline efforts for both Regional San and Shortlisted Respondents once the RFP is issued.</p>	<p>Regional San will release draft exhibits prior to the issuance of the RFP to the extent they are ready. However, it is not expected that many of these exhibits will be completed prior to the RFP release.</p>
